

Objective 2

08 luglio 2016

Objective 2 concerns the identification and realisation of tools and best practices for rendering SMEs more "corruption-proof," encouraging them to play an active role. They will be given a toolkit containing procedures for self-evaluation of their exposure to corruption when they open an entrepreneurial activity in a particular economic and/or territorial sector. The toolkit will also contain measures to mitigate the probability of becoming a victim of corruptive phenomena. (As a typical example of a best practice: "To discourage potential corruptive behaviour, never receive a public official alone."). A measurable indicator of success in achieving Objective 2 will be the number and quality of best practices and procedures contained in the toolkit.
